

Backend Django Project: **YouTube API**

This Django project presents simple (only with basic functionalities) API for YouTube platform.

Main features of this project are user authentication, channels, contents, comments etc.

User can register and login with JWT token, create channel, watch other channels, add contents to its channel, like, dislike and save other contents, subscribe to other contents etc.

Project has 4 apps: authentication (user model), applications (channel & profile models), content (base content, video content, status, comment, playlist models)

Django project includes rest framework tools, debug toolbar, and default admin site.
